STEMTASTIC Series 2022-2023

February 13, 2023

From climate change to biodiversity loss, global food systems contribute to some of the most pressing environmental challenges facing society today. Yet, the ways in which we produce, consume, and engage with food also hold immense transformative potential for people, plate, and planet. Together, we will explore the ways in which food systems and planetary health are inextricably linked, as well as opportunities to engage students in these topics.

Kelly McGlinchey is the founder of Table and Tilth, a food sustainability consultancy dedicated to helping food businesses cultivate success and grow their impact. Kelly holds her BA in Environmental Studies from Dartmouth College, and is currently pursuing her Master of Environmental Management at the Yale School of Environment. tableandtilth.com
